Form 990 is available for public inspection and, for some people, serves as the primary or sole source of information about a particular organization. How the public perceives an organization in such cases may be determined by the information presented on its return. Therefore, please make sure the return is complete and accurate and fully describes, in Part III, the organization's programs and accomplishments.

<sup>\*</sup> These nineteen controlled corporate entities have been established for business and legal reasons which assist the Conservancy in accomplishing its corporate goals in various states in the United States. For example, several of these entities were established to own and manage land where such a step was made necessary to comply with state law. Each of these organizations has been incorporated as a charitable organization with goals and objectives identical or quite similiar to those of the Nature Conservancy. All of their activities are carried out in the name of the Nature Conservancy. This return reflects all of the activity of the entire organization, including these incorporated sub-units, on a consolidated basis. No separate group return is filed.

STATEMENT 9
FORM 990, PART III - PRIMARY EXEMPT PURPOSE

The Nature Conservancy is a conservation organization. The mission of the Conservancy is to preserve plants, animals, and natural communities that represent the diversity of life on Earth by protecting the lands and waters they need to survive.

### **STATEMENT 10**

Form 990 Part III – Statement of Program Service Accomplishments

Program Expenses: 370,943,550
Program Grants: 28,935,858
Total: 399,879,408

FAST FACTS
The Nature Conservancy

- was founded in 1951
- today works in 28 countries, and all 50 U.S. states
- has protected more than 117 million acres and 5,000 river miles around the world
- has more than 100 marine conservation projects in 21 countries and 22 U.S. states
- partners with communities, businesses, government agencies and other organizations
- has approximately 900,000 members and supporters
- has 3,200 employees, 720 of whom are scientists

## Our Approach: Mission Strategy and Values

Throughout our 53-year history, The Nature Conservancy has been known for a unique and highly successful approach to land conservation. We initially used land acquisition to "preserve wild nature," the organization's statement of purpose in the 1950s and 1960s. But as the Conservancy grew over the years and as increasing threats to natural lands created even more demand for action, we tightened our focus and expanded the array of tools we use to achieve lasting conservation results.

Today The Nature Conservancy is widely regarded and respected as an effective, influential conservation organization. We have made laudable progress toward our mission, helping protect more than 117 million acres around the world and with active conservation projects in all 50 states in the United States and in 28 other countries. We have a focused mission; a strategic framework to achieve that mission, Conservation by Design; and a unique set of values that guides how we pursue our work.

#### Mission

The mission of The Nature Conservancy is to preserve plants, animals and natural communities that represent the diversity of life on Earth by protecting the lands and waters they need to survive.

We aspire to the vision articulated more than 50 years ago by Aldo Leopold in *A Sand County Almanac*: conservation is a state of harmony between man and nature.

### Strategy

Conservation by Design is our strategy for guiding conservation results. It is a systematic, science-based approach to identifying and protecting priority conservation areas. It has two key components:

- Through a rigorous, science-based approach, we identify the places most critical for the long-term protection of ecosystems, plants and wildlife within and across ecoregions. (An ecoregion is a large geographic area defined by natural features such as vegetation and geology, e.g., the Sonoran Desert.) Together, these places create our Conservation Blueprint.
- Conservation by Design guides the mix of tools and actions we employ to abate threats and to secure tangible, lasting conservation results. Different places require different strategies. At each place, we tailor our tools and strategies to local circumstances. Given the wide variety of threats we encounter, we must be innovative in developing flexible, uniquely tailored action plans.

Conservation by Design ensures that we focus on the right places and take the right action to achieve conservation results. The efficacy of this approach is increasingly recognized and lauded by others, such as the Doris Duke Foundation, who are eager to use a science-based, pragmatic strategy for fulfilling their own commitments to protecting biodiversity.

- We work *collaboratively with partners*—businesses, government agencies, multilateral institutions, communities, individuals and other non-profit organizations.
- We pursue non-confrontational, pragmatic, market-based solutions to conservation challenges.
- We employ the best available *scientific information* and practices to guide our conservation actions.
- We tailor our conservation strategies and tools to *local circumstances*.

- We work across landscapes and seascapes at a scale large enough to conserve ecological processes and to ensure that protected lands and waters retain their ecological integrity.
- We work with willing sellers and donors, both public and private, to protect ecosystems, plants and wildlife through purchases, gifts, exchanges, conservation easements and management agreements and partnerships.
- Outside the United States, we work with government agencies and like-minded partner organizations to provide scientific know-how, infrastructure, community development, professional training and long-term resources.

#### **Values**

The Nature Conservancy's organizational values are as indispensable to its success as its unifying mission, vision, goals and measures. These attributes characterize how we conduct ourselves in our quest for lasting conservation results.

## **Integrity Beyond Reproach**

The trust and responsibilities placed in us by our donors, members, partners and the public are paramount. With honesty and strict accountability, we will maintain the highest ethical standards in all of our organizational endeavors.

## **Continuity of Purpose**

Our mission of preserving biological diversity guides everything we do, from the focus of our conservation efforts to the allocation of our resources. Systematically, strategically and using the best scientific information available, we will work through nonconfrontational means toward tangible and lasting results. We conduct our business in an environmentally sensitive manner.

## One Conservancy

Our strength and vitality lie in being a single unified organization working locally to achieve Conservancy-wide objectives. We value the collective and collaborative efforts that are so essential to our success, and we believe in maintaining constructive and supportive relationships with each other.

#### **Effective Partnerships**

The scope and urgency of our mission require that we reach out to all sectors of society—public and private—to forge strong, productive partnerships based on mutual benefit and trust. We succeed only through these combined efforts.

### **Innovation and Excellence**

To accomplish all we have set out to do requires vision, resourcefulness, a responsible entrepreneurial spirit and adaptability to change. We encourage original thought and its practical application. We value the pursuit of excellence and those who can inspire others to do the same.

## Commitment to People

Our success depends on the people who work for and with The Nature Conservancy. We must actively involve men and women from a broad spectrum of ethnic and cultural backgrounds, ages and abilities, lifestyles and beliefs, in an environment that encourages each of us to achieve our potential and values the contributions of all. We will respect the needs, values and traditions of the communities in which we work.

## Commitment to the Future

We want future generations to inherit a biologically rich world. Individually and collectively, we can make a difference. We pledge ourselves to that goal.

#### **Global Conservation That Works**

This year the Conservancy adopted an ambitious and transforming 10-year conservation goal that will drive us to work at a more global scale and in every variety of landscape. Wherever we work, we will pursue strategies tailored to three main types of habitat: terrestrial, freshwater and marine. In all of these places, the Conservancy looks for opportunities to share science-based strategies, tools and lessons learned across diverse landscapes.

The Nature Conservancy's corporate policy requires the Board of Governors to review and approve conservation real estate projects and to authorize internal loans for such projects where the purchase price of such land is in excess of \$2 million dollars. Authority to undertake real estate projects where the purchase price is less than that amount has been delegated by the Board to the President of the The Nature Conservancy and, in turn, delegated by him to others in the organization subject to certain dollar limitations. In Fiscal Year 2004, the Conservancy's Board of Governors itself reviewed and approved 30 conservation real estate projects to protect approximately 952,000 acres of land at a cost of approximately \$237,600,000.

What follows are few examples of places where the Conservancy is working in similar habitats to protect, restore and preserve lands and waters around the world. For instance, the Conservancy's experience from working in coniferous forests in northern Maine is helping to inform its conservation strategy in other coniferous forests. The knowledge gained from developing an ecoregional plan for the Caribbean Basin is guiding ecoregional planning in other areas. And lessons learned from restoring and managing large floodplain rivers in Brazil, China and the United States will help shape plans for other large floodplain river basins.

## **Conservation That Works**

In more than 50 years of environmental protection, preservation and restoration leadership, The Nature Conservancy has learned many things about conservation that works.

We've learned that protecting Earth's last great places takes both heart and sound science. In the past five decades, the Conservancy has grown and evolved into an enterprise recognized around the world for sophisticated, science-based strategies. Using Conservation by Design—a planning methodology we've refined over the past 10 years—we assess the ecological value and priorities of each location we seek to protect. We also determine which tools—from conservation easements and large-scale ecological assessments to debt-for-nature swaps and community-based restoration projects—suit a project's needs.

We've learned that lasting results require dedicated and diverse partners and funding sources. Wherever we work, we engage others in our mission—government and nongovernment organizations; businesses and nonprofits; conservation groups and citizens; scientists and farmers; ranchers and fishermen. From the banks of the Upper Mississippi to the Solomon Islands—wherever people depend on ecologically important land for their livelihoods—we collaborate with local communities to protect their rights while we preserve critical habitat. And in addition to soliciting private donations, we seek public funding for our large-scale efforts.

We've also learned that conservation achievements can and must be measured—but not just in dollars and acres. Today we rely on a broad array of measures that tell us how well our methods are working, where we can improve and what we can adapt to other locations. We assess these measures on every project and across the broad, ecologically defined areas we seek to protect.

With four other international conservation organizations, we're working to establish a conservation audit process that can be used to assess the effectiveness of all conservation projects. The shared standards and processes that emerge from this partnership will guide all our work in the future.

Everything the Conservancy has learned about conservation that works confirms our belief that the right tools, in the hands of the right people, lead to lasting results. In the pages that follow, we present some of the projects that illustrate our philosophy, our methods and our progress in 2004 and some of the people—inspired, skilled, dedicated—who make conservation work.

## Maya Forest

Stretching from Mexico's southern Yucatan Peninsula throughout Belize and into northern Guatemala, the Maya Forest is the largest contiguous tropical forest in all of Mexico and Central America.

It's also the largest tropical forest in the Western Hemisphere after the Amazon, home to jaguars, howler monkeys, and hundreds of rare and unusual birds and plants.

But natural wonders are not the only treasures the Maya Forest holds. Mysterious ancient Maya cities peek through the forest canopy, reminding visitors of the storied civilization

whose descendants still inhabit the fringes of the forest. In this unforgettable place, lush forests and remnants of an ancient culture confront a frontier economy dominated by slash-and-burn agriculture and poorly managed extraction of natural resources.

Using innovative strategies that are models for conservation elsewhere, The Nature Conservancy is working across three nations to protect and manage the Maya Forest's natural and historic resources. For 15 years, the Conservancy has been working with partners in Guatemala, Belize and southern Mexico to plan and execute conservation actions in the Maya Forest. Today, an alliance of partner organizations is completing the first comprehensive, long-term conservation plan for the entire region. This plan will focus on protecting the Maya Forest's remaining natural habitat and encouraging conservation-compatible use of natural resources.

The Conservancy has teamed with local conservation groups and government agencies to acquire places that reflect the Maya Forest's natural and cultural value and implement on-the-ground conservation approaches. These places include more than 22,000 acres in Guatemala's Sierra del Lancandón National Park and nearly 400,000 acres of critically threatened lands in Mexico's Calakmul Biosphere Reserve.

Working with the Conservancy, six U.S. and Canadian energy companies are investing \$5.8 million to develop a pilot program that will measure how much carbon is absorbed and stored by Belize's Rio Bravo tropical forests. Partners seek to reduce carbon emissions by approximately 2.65 million tons over 40 years, helping to alleviate global warming and creating a model for programs elsewhere. With other partners, the Conservancy is creating a water management plan that will abate agricultural threats while allowing the community to use Rio Bravo's New River Lagoon, the deepest body of fresh water in Belize.

The Conservancy also works with local organizations to strengthen designated parks within the Maya Forest that are not protected effectively. The Conservancy provides technical support to local organizations to define their strategic vision, implement management plans and train local people as park guards and stewards. This approach has proven particularly effective in Guatemala, where governmental conservation capacity is limited.

## CONSERVATION THAT WORKS

In the Maya Forest, effective conservation requires strong partnerships with local governments; local and indigenous communities; and conservation groups in three countries—Guatemala, Belize and Mexico. With knowledge gained through on-the-ground conservation, the Conservancy has created the first comprehensive, long-term plan to protect the forest's remaining habitat.

#### **MEASURES**

Defensores de la Naturaleza, one of the Conservancy's partners in Guatemala, has begun a number of surveys that will enable partners to better understand the forest's biodiversity and measure conservation success over time. One survey, which includes a study of the migration and nesting patterns of scarlet macaws, will inventory bird species and vegetation. Another survey will assess jaguar habitat along the Usumacinta River. Plans are also in place to monitor biodiversity and conservation impact in Sierra del Lancandón and Tikal national parks.

#### **CONSERVATION PROFILE**

Location: Guatemala, Belize, Mexico

Description: More than six million acres of lowland jungle, comprising both moist and dry forest ecosystems as well as freshwater ecosystems.

#### **Threats**

Forest fires, incompatible agricultural practices, illegal logging, road and dam construction, oil exploration and drilling, unplanned development, looting of cultural resources, water pollution caused by agricultural runoff, growing human population

#### **Partners**

Defensores de la Naturaleza (Guatemala), Consejo Nacional de Areas Protegidas (Guatemala), Instituto de Antropologia e Historia de Guatemala, Programme for Belize, Pronatura Peninsula de Yucatán, Comisión Nacional de Areas Naturales Protegidas (México), Secretaría de Ecología del Estado de Campeche (México)

#### **Priorities**

- With partners, create a comprehensive tri-national conservation plan to implement concerted, joint action.
- Provide permanent protection for parks.
- Work with local communities to improve farming practices and to create sustainable livelihoods.
- Expand ecotourism to benefit local communities.
- Monitor freshwater quality in key areas to provide input for planning and implementation
- Promote fire management practices to protect key ecosystems

## Upper Mississippi River

Cutting through the heart of North America, the Upper Mississippi River has played a central role in the continent's history, culture and commerce. This complex and globally important floodplain river system, which drains approximately 189,000 square miles across seven states, includes 11 major tributaries and more than 30,000 miles of streams, lakes and marshes. Across its expanse, this mighty system supports a wealth of native plants and animals, including hundreds of fish, mussel and crayfish species, and touches a

vast mosaic of human communities as it travels roughly 1,300 miles southward from Minnesota to the Gulf of Mexico.

By most ecological measures, the health of the Upper Mississippi is in decline, the result of agriculture, forestry and urbanization. But there is hope. In 1992, the National Research Council identified the Upper Mississippi River and one of its tributaries, the Illinois River, as two large, floodplain river systems where real opportunity exists to restore ecological integrity. If partners could take a system-wide approach to conservation—and if economic activities could be aligned with the river's ecological needs—the Upper Mississippi River's current decline could be reversed.

The Nature Conservancy brings decades of experience in protecting freshwater areas in the Upper Mississippi River Basin, where it has long worked alongside an array of partners that include nonprofit organizations and local, state and federal governments. In 2003, the Conservancy and NatureServe completed a study that identifies places that must be protected to ensure the Upper Mississippi's health. By pinpointing sites critical for freshwater and land-based biodiversity—places that harbor more than 100 at-risk species—the study provides a roadmap for both immediate conservation action and long-term planning. For the first time, partners in all affected states can share a comprehensive, system-wide perspective, looking beyond the waterway itself to the areas that feed, support and depend on the river.

On the basis of this study, the Conservancy and partners are developing a conservation plan for this network of important freshwater habitats. The Conservancy will integrate work at individual sites and study how these sites contribute to the health of the river floodplain system. In addition to protecting natural resources at each site, this approach will influence the health of the entire Upper Mississippi network. As they continue to gather data critical to the revitalization of this peerless river, partners will be creating a scientific model that can help protect and restore high-priority areas in other threatened places.

## CONSERVATION THAT WORKS

Along the Upper Mississippi River, the Conservancy is collaborating across state lines to restore and protect a river whose ecosystems invigorate the economies of a region of 30 million people. Partners are gathering and sharing data to guide long-term restoration and setting priorities for more than 40 sites critical to the river's health.

## **MEASURES**

To ensure long-term success, the Conservancy and its academic and agency partners are integrating learning into their conservation effort along the Upper Mississippi. Partners are also tracking several factors that illustrate the impact of conservation action: changes in reconnected floodplain acres, health of migratory bird and fish populations, sedimentation rates and water quality, as well as flood water storage—one measure of how much habitat is available for birds and spawning fish.

#### **CONSERVATION PROFILE**

Location: Upper Mississippi River Basin, covering a seven-state region—Illinois, Indiana, Iowa, Minnesota, Missouri, South Dakota and Wisconsin

Description: Vast mosaic of rivers, streams, marshes, floodplains, forests and savannas; a haven for diverse plants, animals and freshwater creatures

#### **Threats**

Habitat loss and alteration, decline in water quality, alteration of natural water flow, incompatible agricultural field practices, climate change, invasive species

#### **Partners**

NatureServe, U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, Environmental Protection Agency, USDA Natural Resources Conservation Service, state governments and many other organizations

#### **Priorities**

- Work with stakeholders and partners to share information and take efficient action toward mutual goals.
- Pursue federal and state policies that contribute to the conservation of the river system.
- Work with partners to implement a shared and rigorous adaptive management plan.
- Develop information needed to measure conservation and restoration success.
- Refine local plans to create a global model for assessing local habitat areas and identifying conservation priorities.

#### Walls of Jericho

Certain places are unforgettable not just for their natural beauty or the rare and threatened plants and animals they support, not just for the cultural artifacts they contain or their historic value—they are special because of the way they make people feel.

The Walls of Jericho, one of the sites acquired by the Conservancy in 2004, is one of those places. Its wild beauty is undisputed, its natural communities recognized as rare, but those who have visited the site on the Alabama/Tennessee state line are most struck by its resemblance to a cathedral—quiet, awe-inspiring, deeply spiritual.

The central feature of the Walls of Jericho, once the hunting ground of Davy Crockett and his family, is a large bowl-shaped amphitheater that shoots water out of holes and cracks on the canyon wall during times of high water flow.

For the Conservancy, preserving this one-of-a-kind place began with a well-known conservation strategy: acquiring important lands and waters and partnering with others to ensure long-term management and protection. In 2004 the Conservancy, supported by grants from the Doris Duke Charitable Foundation and the Lyndhurst Foundation, purchased the land from Stevenson Land Company for \$13.5 million. Through the Forever Wild Program, the Alabama Division of State Lands has purchased 12,510 acres of the land in Alabama. The Conservancy will hold the 8,943 acres in Franklin County, Tennessee, in anticipation of Forest Legacy funding that would allow transfer of the land to the Tennessee Wildlife Resources Agency.

Preserving the site protects the headwaters of the Paint Rock River Watershed as well as one of the few large, intact functional landscapes remaining in the southeastern United States and connects other large, intact forestlands within the Jackson Mountains. It also protects an extraordinarily diverse array of creatures, among them rare fish and 48 species of freshwater mussels—many globally imperiled. Migratory songbirds, including the Cerulean warbler, also frequent the forests of the watershed.

Many in the Deep South have heard of the legendary Walls of Jericho, but few have visited. Once part of Texas oil baron Harry Lee Carter's 60,000-acre property, the land was divided and officially closed to visitors in 1977 after Carter's death. The Conservancy has restored public access to the site, enabling a new generation of conservationists to seek inspiration there. Low-impact recreation activities—birding, hunting, nature study, wildlife photography and hiking—will enable local people and visitors once again to experience the Walls of Jericho's majestic natural beauty.

#### CONSERVATION THAT WORKS

In this corner of America's Deep South, rich in biological diversity, the Conservancy and partners are acquiring biologically important land and restoring and protecting it for future generations. The Conservancy has already purchased 21,453 acres in the area for nearly \$14 million.

## **MEASURES**

In its first U.S.-based assessment, the Conservancy's Measures and Audit Team conducted a conservation audit of the Southern Cumberlands Project, which includes the Walls of Jericho and several sites on the Paint Rock River. Looking at measures such as the health of critical plant and animal populations, scientists found that local conservation strategies are delivering positive results. The audit will enable project staff to better track and report conservation outcomes.

## **CONSERVATION PROFILE**

Location: Southern Cumberland Plateau in northern Alabama and southern Tennessee

Description: 21,453 acres of upland forests, creeks, streams and caves spreading across the Alabama and Tennessee state line

#### **Threats**

High-impact recreational uses, damage to the watershed through development and unsustainable agricultural practices, endangerment of rare fish and mussel populations from potential degradation of watershed streams and rivers

#### **Partners**

Alabama Department of Conservation and Natural Resources, Division of State Lands, Doris Duke Charitable Foundation, Lyndhurst Foundation, Tennessee State Parks, Tennessee Wildlife Resources Agency, U.S. Forest Service Forest Legacy Program

## **Priorities**

- Protect the headwaters of the Paint Rock River Watershed and connect other large, intact forestlands within the Jackson Mountain landscape.
- Restore public access to a historically and geologically valuable site that has been closed since 1977.
- Encourage low-impact recreational activities, such as birding, nature study, wildlife photography and hiking.

#### **Solomon Islands**

Historians remember the Solomon Islands for the World War II Battle of Guadalcanal. In the shadow of emerald forests and in crystal-blue island harbors lie the rusting remains of bombers, destroyers, troop ships and tanks. But the islands support more than the remnants of human history. In clusters of thatched-roof huts raised on stilts along the shore live villagers who earn their living from the islands' lands and waters. They are also on the vanguard of a conservation effort that will preserve and protect these jewel-like islands for the future.

In 1995, the three local communities of Kia, Wagina and Posarae decided to take charge of their fragile resources and set an example for South Pacific neighbors. Invited by these communities and in partnership with the Solomon Islands Government, The Nature Conservancy helped establish the Arnavon Marine Conservation Area, the first community-managed marine conservation project in the South Pacific.

In 2004, the Conservancy and its partners conducted a five-week scientific survey of marine life in the Solomon Islands. As a result of this in-depth survey, scientists discovered that the islands are part of the Coral Triangle, a region that contains the world's richest marine life; before the assessment, scientists thought the Triangle extended no farther east than Papua New Guinea. The assessment also revealed the second highest diversity of coral species on the planet, including nine new species, and confirmed that the Solomon Islands are one of the world's "big five" sites for reef fish species.

Compared with others in the Indo-Pacific, the Solomon Islands' coral reefs are in very good condition. However, overfishing, incompatible land use and coral bleaching (which occurs when warm temperatures kill coral) threaten the health of these living resources in some locations. Findings from the assessment will help Solomon Islands inhabitants better manage the marine resources that are critical to their livelihoods.

The marine survey also confirmed that the Arnavon Marine Conservation Area has played an important role in restoring once-depleted stocks of commercially valuable species—including trochus, giant clams and sea cucumbers. Community leaders have voluntarily established fishing limits and new methods to rebuild stocks and support sustainable harvesting of seafood. Through programs that protect their natural heritage, villagers patrol the beaches during turtle nesting season to prevent poaching. The success of this community-based conservation project offers new hope for other areas throughout the Solomon Islands where villagers are concerned about conserving their natural resources for the future.

#### CONSERVATION THAT WORKS

Working with three Solomon Island villages—Kia, Wagina and Posarae—the Conservancy helped establish the first community-managed marine conservation project in the South Pacific. By recognizing the need to manage their ocean resources, these communities are paving the way for long-term marine conservation and the economic survival of the islands.

#### **MEASURES**

Surveys of the Arnavon Marine Conservation Area demonstrate that local efforts are having a positive impact on several significant species. The Solomon Islands Marine Assessment showed that, although few commercially important fish species inhabit the reefs of the main archipelago, these species are abundant in the marine conservation area. Turtle monitoring also shows that the project area has achieved one of its major goals—protecting nesting hawksbill turtles.

#### **CONSERVATION PROFILE**

Location: In the South Pacific, east of Papua New Guinea

Description: Double chain of 922 islands covering more than 1.35 million square kilometers; one of the world's 10 most biologically diverse locations

#### **Threats**

Overfishing, incompatible land use, coral bleaching, poaching in endangered hawksbill and leatherback turtle nesting beaches

#### **Partners**

Solomon Islands Government, provincial governments, village leaders, community members, Lauru Land Conference

#### **Priorities**

- Encourage and support community-based conservation projects, such as patrols to protect endangered nesting hawksbill turtles and to prevent overfishing.
- Share data from the Conservancy's Solomon Islands Marine Assessment with community and other partner organizations to ensure lasting conservation results and the long-term ecological health of the area.

## Colombia Debt-for-Nature Swap

Many countries with significant natural resources lack the financial resources, though not the desire, to preserve their heritage. In Colombia—one of the five most biologically diverse countries on the planet—The Nature Conservancy is pursuing a strategy that puts conservation squarely and affordably on the local government's agenda and puts the tools of long-term protection into the hands of local people.

In April 2004, the Conservancy, in partnership with the World Wildlife Fund (WWF) and Conservation International, facilitated the negotiation of a debt-for-nature swap for Colombia. This "swap" with the U.S. government will redirect at least \$10 million of Colombia's foreign debt over the next 12 years to protect nearly 11 million acres of tropical forests. In exchange for Colombia's direct investment in conservation, the United States will cancel a portion of the country's debt.

Partnering in the agreement—a model for other nations in need of funds for conservation—the U.S. Department of the Treasury will contribute \$7 million; Conservation International's Global Conservation Fund, The Nature Conservancy and WWF will provide an additional \$1.4 million.

Conservation efforts supported by the debt-for-nature agreement will enable the protection of three regions of extraordinary ecological value that are high-priority projects for the Conservancy. In the tropical portion of the Andes Mountains, Colombia will protect approximately 4.2 million acres graced by some of the country's last remaining stands of oak. Another 3.2 million acres along the Caribbean coast include the world's highest coast mountain, 18,900-foot Sierra Nevada de Santa Marta. A third area covers the Llanos, or plains, along the Orinoco River—the world's third largest river in terms of volume—and includes 3.5-million-acre Tuparro National Park and its buffer zone. A UNESCO Natural Biosphere Reserve since 1979, the park is home to the jaguar, river dolphin, endangered giant armadillo and critically endangered Orinoco crocodile, found only in this part of South America. It is also a major nesting ground for migrating birds from North America.

In each of these areas, debt-for-nature funds will help establish private and public protected areas and reserves and restore and maintain existing protected areas. To enable lasting conservation results, Colombia will invest a portion of the funds in local stewardship by building capacity among researchers, individuals and organizations.

Colombia's debt-for-nature swap is made possible by the Tropical Forest Conservation Act of 1998 (TFCA), which allows nations to reduce their foreign debt in exchange for making local-currency investments in conservation work. Other countries that have benefited from TFCA include Bangladesh, Belize, El Salvador, Panama, Peru and Thailand. The legislation is currently up for reauthorization before the U.S. Congress.

#### CONSERVATION THAT WORKS

Supportive public policy is key to conservation success. Working with the U.S. and Colombian governments, the Conservancy and partners brokered an innovative debt-fornature swap that enables Colombia to redirect \$10 million of its foreign debt toward the protection of 11 million acres of tropical forest over the next 12 years.

#### **MEASURES**

In Colombia, where the Conservancy helped broker a debt-for-nature swap, partners are developing landscape-scale conservation plans to measure the results of their work in protected areas and across biological corridors. A technical advisory committee will collect and analyze information about the three regions affected by the debt swap, establish a biodiversity baseline, identify gaps and recommend actions. Priorities defined by the committee will help conservation partners monitor the success of debt-swap projects implemented over the next 12 years.

#### **CONSERVATION PROFILE**

Location: Colombia, South America

Description: 4.2 million acres of the Andes mountain range, 3.2 million acres along the Caribbean coast and 3.5 million acres of the Llanos (plains) along the Orinoco River

#### Threats

Deforestation, incompatible agriculture and forestry practices, illegal hunting, human settlement, cattle ranching, timber harvesting, oil and petroleum exploration and contamination

#### **Partners**

World Wildlife Fund, Conservation International, U.S. Agency for International Development, Fondo Para Acción Ambiental, Unidad de Parques Nationales de Colombia, Government of Colombia, U.S. Department of the Treasury

#### **Priorities**

- Through the Tropical Forest Conservation Act of 1998, leverage funding that enables the Colombian government to take action in conserving the country's rich natural heritage.
- Establish private and public protected areas and restore and maintain existing protected places within three key areas.

- Build conservation capacity among local researchers, individuals and organizations.
- Secure congressional reauthorization of the Tropical Forest Conservation Act.

## **Department of Defense Partnership**

As the urbanized world encroaches on wildlife habitat, it also threatens the wild places that provide important training and testing grounds for the military. In an expanded partnership, the U.S. Department of Defense and The Nature Conservancy have joined forces to protect natural resources that matter deeply to both organizations.

The land at the heart of this partnership is on or near more than 400 major military bases across the United States, plus areas beneath low-level military flight corridors essential to flight testing and training. These places represent every imaginable terrain in which American fighting forces might find themselves: deserts, coastlines and estuaries, prairies, swamps, mountains, tundra and forests. Here the military trains thousands of men and women to defend the nation, often using complex modern weaponry that cannot be tested near populated areas.

In 2002 Congress created the framework to protect these areas by giving the Department of Defense authority to partner in establishing buffer zones around military bases where urbanization threatens the realism and effectiveness of military testing and training. By protecting land in cooperation with others, forming partnership agreements or creating easements, the Department of Defense and partners aim to avoid incompatible development and create safe havens for wildlife.

Military and conservation partners are already working to protect important habitat around more than 20 key military bases, and the list keeps growing. At Fort Bragg in North Carolina, the Sandhills Conservation Partnership is preserving one of the last remnants of a longleaf pine forest that once extended all the way to east Texas. So far the partnership has protected 9,100 crucial acres, including corridors that allow wildlife to move from the base into other protected areas.

In Florida's panhandle, one of the country's biodiversity "hot spots," the Department of Defense, the State of Florida and the Conservancy established a formal partnership to create the Northwest Florida Greenway. This planned protected corridor will stretch over 100 miles, covering more than 700,000 acres and linking protected areas from Alabama to the Apalachicola Bay.

At North Carolina's Camp Lejeune, partners are working to protect the swampy coastal plain that supports numerous wetlands species as well as the largest amphibious base in the world. Conservation organizations have purchased key property once slated for a golf community, protecting wetlands headwaters, maintaining pristine forest corridors and preserving a prime military training site.

The Department of Defense and the Conservancy are also working to protect the high pinyon ridges and short-grass prairies around Fort Carson in Colorado, where population growth threatens wildlife as well as the testing grounds for high-tech weaponry. Partners are collaborating with local ranchers to create easements that permanently limit development on land that borders Fort Carson, its restricted weapons testing areas and its threatened wildlife habitat.

#### CONSERVATION THAT WORKS

Effective conservation sometimes allies unlikely partners. To protect natural habitat that is also important for military testing and training, the Conservancy is collaborating with the Department of Defense and others by purchasing land that borders military bases and establishing conservation easements to create buffer zones.

#### **MEASURES**

At military bases throughout the United States, partners are using the Conservancy's science-based conservation approach to assess ecological value, identify threats and measure results. The Conservancy's framework helps military planners monitor ecological sustainability and adapt their methods for greater success, supporting the military's mission while conserving the ecological integrity of training lands. Partners will adapt this science-based planning process for use across a wide range of military installations and ecological systems.

#### **CONSERVATION PROFILE**

Location: Major U.S. military bases and key flight corridors throughout the United States

Description: Portions of the Department of Defense's more than 25 million acres of land and numerous flight corridors, plus surrounding lands, in every type of terrain and ecosystem, from prairie to desert to wetlands.

#### **Threats**

Unplanned development and fragmentation and loss of habitat

#### **Partners**

U.S. Department of Defense, U.S. Fish and Wildlife Service, National Park Service, Bureau of Land Management, U.S. Forest Service, state and local governments, national outdoor recreation groups and many national and local conservation organizations

#### **Priorities**

- Work with military, government and nongovernment groups and community partners to protect high-value habitat near military testing and training sites and underneath critical low-level military flight corridors.
- Campaign to increase congressional funding for the buffering program from \$12.5 million in 2005 to at least \$60 million in 2006 and establish annual funding of approximately \$100 million thereafter to reap the full benefits of the program.

#### Caribbean Basin

The Caribbean Basin is one of the world's epicenters of biological diversity. It is also one of Earth's most challenging wild places to protect and preserve. More than 115 islands and 28 nations, each with its own biology and culture, make up the Caribbean Basin. And across this vast and colorful swathe of land and sea, a multitude of threats encroach, from industry and cruise-ship tourism, to population and urban sprawl, to incompatible agriculture and fishing.

Conservation success in this unique and threatened area requires innovative science and collaboration—strengths the Conservancy is already using to effect positive change. In 2003 the Conservancy initiated the region's first broad, science-based conservation assessment—in geographic scope, one of the largest ever undertaken. By 2004, the effort had produced the most comprehensive, seamless database ever assembled for the area, for the first time enabling conservation action on a scale that matches the enormous scope and diversity of the Caribbean.

This state-of-the-art database incorporates cutting-edge, satellite-based technologies that enable conservation planners to visualize, manipulate and analyze high-resolution spatial data across broad areas. Designed to incorporate new information dynamically, the system allows flexible updates and provides strategic direction on the fly—a departure from past plans based on static maps and rigid strategies.

The Conservancy and other organizations involved in the Caribbean Assessment are now sharing their database, results and tools at no cost with any local parties —governments, tourist associations, industry, other conservation organizations—that are committed to applying these tools for noncommercial purposes. These arrangements have enabled the Conservancy to pursue partnership opportunities and form new alliances with national governments across the Caribbean. By working with scientists and government officials from Haiti and the Dominican Republic, the Conservancy is developing the first comprehensive conservation blueprint for Hispaniola, an island shared by the two nations. Although Haiti and the Dominican Republic share a watershed and other ecological linkages, they have never before partnered on conservation. Similarly, the Jamaican government is using ecoregional assessment maps to revise the plan for its system of national protected areas, paying new attention to the variety of ecosystems in the area as well as opportunities for ecological connectivity.

In the Virgin Islands, the Conservancy is working with the British Virgin Islands National Parks Trust to significantly expand its network of marine protected areas. The resulting network will serve as a model for managing marine protected areas throughout the region. In addition, the Conservancy is working with the U.S. Virgin Islands Department of Agriculture and the U.S. Forest Service Legacy Program to protect 2,300 acres of coastal woodlands, dry tropical and moist forests on St. Croix, U.S. Virgin Islands.

#### **CONSERVATION PROFILE**

Location: Caribbean Basin (28 countries)

Description: Approximately 1.6 million square miles, including nearly 93,000 square miles in more than 115 islands and 3,400 rocky islets and cays

#### **Threats**

Poorly planned tourism and development, unregulated fishing, unsustainable agriculture, urban sprawl

#### **Partners**

United Nations Environment Programme—Caribbean, World Resources Institute, University of South Florida and a variety of government and conservation organizations in Jamaica, the Bahamas, the U.S. Virgin Islands, the British Virgin Islands, the Dominican Republic and Haiti

#### **Priorities**

- Continue to provide tools and data to national and regional conservation efforts in order to promote sound management decisions and large-scale conservation action.
- Maintain a comprehensive Caribbean-wide information system that details the region's biological diversity and socio-economic status.
- Promote use of the database and related technological tools by offering free and open access to partners, managers and stakeholders throughout the region.
- Refine this toolkit to create a model for use in other areas.

#### CONSERVATION THAT WORKS

In the Caribbean Basin, one of the world's most threatened centers of biodiversity, sound science provides a framework for long-term conservation. On the basis of the first comprehensive ecological assessment of the region, the Conservancy has created a seamless biodiversity database that enables partners to share information and collaborate on a dynamic plan of action for the entire area.

#### **MEASURES**

The Conservancy monitors the impact of conservation in the Caribbean by measuring success site by site. In Jamaica's biologically important Cockpit Country, proposed as a World Heritage Site, scientists are measuring the health and integrity of conservation targets such as cave ecosystems and the giant swallowtail butterfly. Results of this study will enable partners to plan and implement the best strategies for this site and similar sites across the Caribbean.

## STATEMENT 23 FORM 990, PART VIII - ACCOMPLISHMENT OF EXEMPT PURPOSES

Row Description

Oza ACTIVITY EEES The Concentrative foreign fees paid by a variety of

- 93a ACTIVITY FEES The Conservancy derives revenues from fees paid by a variety of activities associated with meetings and educational conferences on Conservancy property, which are related to the Conservancy's purpose to promote conservation and proper use of natural resources. The Conservancy also receives mitigation fees from corporations which is used to aid conservation
- 93b CONTRACT FEES The Conservancy provides information, data, and consulting related to biological conservation science, and protected areas design and management to private organizations. This information assists these organizations in planning, implementing, and managing Conservancy programs which furthers the exempt purpose goals of the Conservancy.
- 93c LAND SALES TO GOVT AND OTHERS The Conservancy derives revenues from the sale of land to federal and local governments for use by these as parklands and other recreational and natural preserves in the interest of preservation, protection, and conservation of natural habitat
- 93g FEES AND CONTRACTS FROM GOVERNMENT AGENCIES The Conservancy provided information, data, and consulting related to biological conservation science and protected areas design and management to various government agencies
- 102 SALE OF INVENTORY The Conservancy derives revenues from the sale of low cost merchandise and memorabilia containing the Conservancy's logo which further promotes the educational goals of the Conservancy.
- 103b MISCELLANEOUS INCOME During the course of operations, the Conservancy derives revenues from various sources which support its fundamental exempt purpose of preserving, protecting, conserving, and managing natural habitat, and educating the public about these matters.

#### STATEMENT 24

FORM 990 - SCHEDULE A. PART III - EXPLANATION FOR LINE 2a

Mr. Alfred R. Berkeley III (TNC board member) is a director of Kintera Inc Carol/Trevelyan Strategy Group (CTSG) was acquired by Kintera in March 2004. CTSG entered into the following transaction with The Nature Conservancy:

The Nature Conservancy has entered into a consulting agreement under which CTSG will recommend web fundraising strategies to TNC.

Mr. Berkeley did not participate in this transaction in any way.

Mr. John Smith Jr.(TNC board member), retired as Chairman of the Board of General Motors Corporation in May, 2003. General Motors entered into the following two transactions with The Nature Conservancy.

An agreement covering a five-year period (1999-2004) which provides The Nature Conservancy cash for its general purposes, as it chooses, vehicles, and other miscellaneous assets of value, in exchange for the right to publicize this relationship subject to Conservancy approval.

An agreement with the Conservancy to undertake a climate change project under which the Conservancy received \$10 million and General Motors may potentially receive greenhouse gas mitigation offsets.

Mr. Smith did not participate in this transaction in any way.

Mr. Henry J. Paulson, Jr., is the Chairman and Chief Executive Officer of Goldman Sachs & Company.

Working through the Goldman Sachs Charitable Fund as the owner of HWY, LLC, a Delaware limited liability company, Goldman Sachs acquired certain properties in Chile and Argentina. HWY, LLC, as the new owner, then contracted with The Nature Conservancy for conservation-related consulting services and advice on the land management, oversight and ecological monitoring of these properties, in order to assist in the preservation, protection and maintenance of their natural features and ecological values. During the fiscal year ended June 30,2004, TNC performed and was paid for the consulting services \$144,895 over an eleven-month period, based on the approximate market value of such services.

Mr. Paulson is not a director or an officer of either Goldman Sachs Charitable Fund or of HWY,LLC, and he did not participate in this transaction.

THE NATURE CONSERVANCY 990 TAX RETURN ADDITIONAL STATEMENTS FY04

STATEMENT 27 FORM 990 SCHEDULE A, PART VI-B

The Nature Conservancy is a conservation organization that acquires and protects environmentally significant land, conducts scientific research, and educates the public about the importance of conservation. In support of this mission, The Nature Conservancy devoted less than 1% of its operating budget to lobbying on legislation during fiscal year 2004.

The Nature Conservancy engaged in limited advocacy activities at the federal, state, local, and international levels. At the federal level, The Nature Conservancy attempted to influence policy in the following major issue areas: seeking increased appropriations for federal land and water management agencies (Department of Interior, Department of Agriculture, Council on Environmental Quality, Office of Management and Budget); strengthening natural resource conservation laws and policies, including the National Aquatic Invasive Species Act, Climate Stewardship Act, wildlife refuge legislation, Safe, Accountable, Flexible, and Efficient Transportation Equity Act, and American Outdoors Act; and securing federal tax incentives for conservation. At the state level. The Nature Conservancy through its state chapters participated in advocacy activities relating to: funding for state land acquisition and stewardship programs, ballot measures to support open space and conservation, state tax credits to encourage conservation activities, state trust land reform, and purchase of development rights and easement programs. At the local level, The Nature Conservancy supported regional conservation programs and several open space and conservation bond measures. At the international level, The Nature Conservancy expressed views on policies addressing climate change, natural forest restoration and funding for international conservation programs (Neotropical Bird Conservation Act, Foreign Operations, Export Financing, and Related Programs Appropriations Act, Tropical Forest Conservation Act).

In support of these policy objectives, a small number of Nature Conservancy employees and volunteers spent time communicating directly with legislative officials and their staff and sending emails, mailings and newsletters to organization members and members of the general public. A tiny fraction of the thousands of hours volunteers donated to The Nature Conservancy involved attempts to influence legislation. The organization made a limited number of grants to other organizations to support specific legislative initiatives, sponsored media advertisements, and participated in lobbying events and coalition meetings.

STATEMENT 28 FORM 990,PART VI, Line 77

# The Nature Conservancy Changes in Policies Made by TNC Board of Governor's in FY 04

## 1. Reporting Suspected Violations of Law and Policy (adopted 1/30/04):

The Conservancy has adopted a written "whistleblower" policy and procedure to ensure that any employee who wishes to report a potential violation of law, policy or procedure may do so without fear of retaliation.

## 2. Related Entities (adopted 1/30/04):

The Conservancy adopted a policy to provide greater Board of Governors' oversight of the formation, acquisition and operation of related entities, such as other not-for profit or for-profit corporations, partnerships and/or joint ventures, to ensure that their activities are consistent with the Conservancy's mission, policies and procedures.

## 3. Ownership and Management of Lands and Waters (policy amended 3/12/04)

The existing Conservancy policy was amended to affirm the Conservancy's commitment to monitor and enforce those conservation easements or interests in land that the Conservancy holds in order to achieve their conservation objectives and to state the Conservancy's expectation that the relevant operating unit will develop and implement an appropriate monitoring plan to determine whether such goals and objectives are being met.

## 4. Conflict of Interest (policy amended 3/12/04)

The long-standing Conservancy Conflict of Interest policy was amended to strengthen the review process ensure the identification of conflicts of interest involving The Nature Conservancy and related parties as well as situations which may give rise to an appearance of a conflict of interest and to address such conflicts and situations in a manner that will fully protect the integrity and reputation of The Nature Conservancy as well as related parties not just the arm's length standards of applicable law. Under the expanded conflict procedures, a new interdisciplinary committee of experienced Conservancy staff has been created to supplement legal review of all proposed transactions. Actual or potential conflicts involving special circumstances (e.g., those with organizational implications and those involving members of the Board of Governors) will be referred to the Audit Committee of the Board for decision.

Transactions with related parties (i.e., those that do not involve the purchase and sale of land) will also be subject to advance review under the Conservancy's expanded conflicts procedures. Finally, transactions involving major donors will now be subject to advance scrutiny under the expanded conflicts of interest policy. For this purpose, a "major donor" means any individual, corporation, foundation or other entity that has made gifts or pledges of at least \$100,000 (in cash or in kind) on a cumulative basis within the five-year period preceding the proposed transaction.

## 5. Recovery of Costs in Government Real Estate Transfers (policy amended 3/12/04)

The Conservancy affirmed and clarified its long-standing policy for transfers of land (and interests in land, such as easements) to governmental agencies for conservation purposes. This policy is intended to ensure that the Conservancy only recovers its costs upon such a transfer. Recovery of such costs is also generally limited by the fact that governmental units may only pay fair value for property. The Conservancy strengthened its policy to provide more specific guidance with respect to inclusion of direct and indirect costs in the Conservancy's sales prices to governmental entities. In addition, the strengthened policy requires that certain amounts be deducted from the otherwise permissible purchase price.

## 6. Internal Revenue Service Forms 8282 and 8283 (policy amended 3/12/04)

To promote compliance with rules governing the valuation of gifts of land (including interests in land such as conservation easements), the Conservancy strengthened its existing policy and procedures regarding the execution of an *IRS Form 8283* for a donor (as required under IRS regulations to substantiate receipt of the gift) to work cooperatively with prospective donors to encourage such donations to conform to the letter and spirit of the law; to preserve the charitable intent of the donor; and to achieve the conservation goals and be consistent with the organizational values of The Nature Conservancy.

7. Public Positions on U.S. Federal and International Legislation, Adjudicatory and Rulemaking Proceedings, or Policy Matters. (policy amended as of October, 1 2003)

The Nature Conservancy will take public positions on U.S. Federal and international legislation, adjudicatory and rulemaking proceedings, or policy matters at such levels only where: 1) there is a substantial and direct impact on The Nature Conservancy's ability to accomplish its mission; and 2) The Nature Conservancy's participation is essential to achieve the desired outcome of the matter in question.

In determining whether an issue has a substantial and direct impact on the Conservancy's ability to accomplish its mission, the Conservancy will consider the following factors: 1) whether there is a definable, clear threat related to the policy matter in question that could have a significant negative or positive impact on an important Conservancy conservation target(s) at a conservation area; and 2) whether strong scientific evidence exists to

support any proposed Conservancy position; and, in the case of an adjudicatory rulemaking proceeding, 3) whether in advance of the proceeding, creative, positive solutions aimed at achieving critical conservation objectives have been pursued that also consider the needs of other interested parties. A procedure is set forth outlining the process for decision-making and approval on such issues.

8. Public Positions on Legislation, Adjudicatory or Rulemaking Proceedings or Policy Matters at the Local, State and Non-U.S. Country Level (policy amended as of October 1, 2003)

The Nature Conservancy will take public positions on legislation, adjudicatory or rulemaking proceedings or policy matters at the local, state and non-U.S. country level only where: 1) there is a substantial and direct impact on The Nature Conservancy's ability to accomplish its mission; and 2) The Nature Conservancy's participation is essential to achieve the desired outcome of the matter in question.

In determining whether an issue has a substantial and direct impact on the Conservancy's ability to accomplish its mission, the Conservancy will consider the following factors: 1) whether there is a definable, clear threat related to the policy matter in question that could have a significant negative or positive impact on an important Conservancy conservation target(s) at a conservation area; and 2) whether strong scientific evidence exists to support any proposed Conservancy position; and, in the case of an adjudicatory rulemaking proceeding, 3) whether in advance of the proceeding, creative, positive solutions aimed at achieving critical conservation objectives have been pursued that also consider the needs of other interested parties.
